AI Glossary for Business Analysts - 100 Terms

Artificial Intelligence (AI)

Definition: Computers performing tasks that require human intelligence.

Example: Like a personal assistant remembering your preferences.

BA Relevance: Helps BAs explain AI solutions to stakeholders.

Machine Learning (ML)

Definition: AI that learns patterns from data.

Example: Netflix recommending shows based on viewing history.

BA Relevance: Used for predictive features in products.

Training Data

Definition: Data used to teach an AI model.

Example: Teaching a child different fruits with pictures.

BA Relevance: Ensures correct data is available for model training.

Testing Data

Definition: Data used to evaluate a trained model.

Example: Giving a student a mock test before the final exam.

BA Relevance: Helps validate AI accuracy before release.
